Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

solution Sin a I (clone SINS) - white mustard (fragment)
C;Species: Sinapis alba (white mustard)
C;Species: Sinapis alba (white mustard)
C;Species: Sal-Oct-1996 #sequence_revision 13-Mar-1997 #text_change 16-Jul-1999
C;Accession: 656478

FUNCTION: The UVARB. repair system catalyzes the recognition and processing of DNA lesions. UvrC both incises the 5' and 3' sides of the lesion. The N-terminal half is responsible for the 3' incision and the C-terminal half is responsible for the 5' incision (By similarity).
-!- SUBUNIT: Interacts with uvrB in an incision complex (By

J. Mol. Appl. Genet. 2:273-283(1983).
-!- FUNCTION: The small, basic, water-soluble napins are one of the two major kinds of storage proteins synthesized in the seed during
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- SUBUNIT: The mature protein consists of a small and a large chain linked by disulfide bonds.
-!- TISSUE SPECIFICITY: Cotyledons and the axis.
-!- SIMILARITY: Belongs to the 2S seed storage albumins family.
                                                                                                                                                                                                                                                                                                                                                                            Crouch M.L., Tenbarge K.M., Simon A.B., Ferl R.; "cDNA clones for Brassica napus seed storage proteins: evidence from nucleotide sequence analysis that both subunits of napin are cleaved

"CDNA clones for Brassica napus seed storage proteins: evidence from
nucleotide sequence analysis that both subunits of napin are cleaved
from a precursor polypeptide.",
J. Mol. Appl. Genet. 2:273-283(1983).
-!- FUNCTION: The small, basic, water-soluble napins are one of the
two major kinds of storage proteins synthesized in the seed during
                                                                                                                                                                                                                                                                                                                                                           -!- SUBUNIT: The mature protein consists of a small and a large chain linked by disulfide bonds.
-!- TISSUE SPECIFICITY: Cotyledons and the axis.
-!- SIMILARITY: Belongs to the 2S seed storage albumins family.
                Brassica napus (Rape).

-i- SUBUNIT: Can form disulfide-bonded heterodimer with CD94.
-i- SUBCELLULAR LOCATION: Type II membrane protein.
-i- TISSUB SPECIFICITY: Natural killer cells.
-i- SIMILARITY: Contains 1 C-type lectin family domain.

"Expression of the BunNAP subfamily of napin genes coincides with the induction of Brassica microspore embryogenesis.",
Plant Mol. Biol. 26:1711-1723(1994)
-! FUNCTION! The small, basic, water-soluble napins are one of the two major kinds of storage proteins synthesized in the seed during its maturation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- SUBBUTE: The mature protein consists of a small and a large chain linked by disulfide bonds.
-!- TISSUE SPECIFICITY: Cotyledons and the axis.
-!- SIMILARITY: Belongs to the 2S seed storage albumins family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                            diphosphate + L-arginyl-tRNA(Arg).
-!- SUBUNIT: Monomer; also part of a multisubunit complex that groups
tRNA ligases for Arg, Asp, Glu, Gln, Ile, Leu, Lys, Met and Pro.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- DOMAIN: The N-terminal (AA 1-72) has two regions predicted to be
alpha-helical that might be involved in the multisynthetase
                                                                                                                                                                                                         -!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

1. Biol. Chem. 277:15237-15240(2002).

2. - FUNCTION: Probable regulator of CDKS activity. May inhibit CDKS clucked view at the interaction with CDKSR1.

2. - SUBDNIT: Interacts with CDKSR1 and CDKSR2. The interaction with CDKSR1 is prevented by the association between CDKSR1 and CDKSRAP2. Interacts also with the complex CDKSR1. Does not interact with monomeric CDKS. The interaction is prevented by the association between CDKSR1 and CDKSRAP2.

2. CDKSRAP2. Interacts also with the complex CDKSR1-CDKS. Does not interact with monomeric CDKS. The interaction is prevented by the association between CDKSR1 and CDKSRAP2.

3. CC -1-DOMAIN: The C-terminal part (475-586) is necessary for the interaction with CDKSR1, while the N-terminal part (1-168) is required for inhibiting the activity of the CDKS kinase.

3. SIMILARITY: CONTAINS 1 TRAM domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, conversionation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, cretenional vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, had, heat or cold trauma, substance-induced medvascularisation of the liver, excessive cremina, substance-induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability or ammmal (the mammal has a condition characterised by fluid cor brain. The peptides are used to in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere consulature inflammation with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

Human and mouse type C lectin(s) - useful as competitive inhibitor of lectin activity and as molecular markers for tissues that express them Example; Fig 3; 72pp; English.

The present invention describes an isolated type C lectin polypeptide (I) comprising amino acid residues 37-133, 37-174, 175-229, 234-360, 381-507, 520-645, 657-809, 824-951, 970-1108, 1110-1243, or 1259-1393 of the protein sequence given in A23822. The first 2 polypeptides are capable of binding to a carbohydrate residue, and the rest of the polypeptides

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused in P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

are useful for producing antibodies capable of binding to these 2 polymeptides. Polymucleotide sequence encoding the polypeptides of the invention are useful in the identification and purification of their native ligands, and as molecular markers of the tissues in which they are expressed. They provide valuable sequence motifs, which can be inserted or substituted into other native members of the endocytic type C lectins, and provide hybridisation probes for searching cDNA and genomic libraries for the coding sequence of other type C lectins. Variants of type C lectins may be used therapeutically as competitive inhibitors of the biological activity of native type C lectins. The present sequence represents a murine phospholipase A2 receptor protein which is homologous to a type C lectin ö SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant. ```
presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosobent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                 Propionibacterium acnes predicted ORF-encoded polypeptide #24882.

Maisonneuve JL; Jones R, Carter D; Bhatia A, Benson DR, Wang S, Jen s, Low Vallieve-Douglass J;

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention, antibodies against polypeptides of the invention; antibodies specific for a polypeptide of the invention; antibodies specific for a p. acnes method for stimulating an immune response specific for a p. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. Example 1; SEQ ID NO 24882; 1481pp; English.

WPI; 2003-381789/36. N-PSDB; ACF64563

antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and amethod for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the colypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for protein. The polynucleotides can also be used as probes or primers for antimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present reading frame) contained within the P. acnes polynucleotides of the canding frame) contained within the P. acnes polynucleotides of the cinvention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the mipo at ftp.wipo.int/pub/published\_pot\_sequences 8×300000000000000×8

2001-616774/71. N-PSDB; AAS59559 Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.

Example 1; SEQ ID NO 14472; 1069pp; English.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne,

```
pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies of specific for P. acnes proteins. These antibodies can be used to down-equilate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by charge linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the primited specification, but was obtained in electronic format directly from WIPO at the vipo.int/pub/published_pot_sequences

method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared to polypeptide and an isolated T cell population constraints T cell spendations, or to polymulectides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polymuclectides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the proteins, T cell populations or antigen-presenting cells that express the proteins, or for stimulating an immune response specific for a P. acnes polypeptides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the connection of an immune response against P. acnes, or for treating acnet and the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present canding frame) contained within the P. acnes polymuclectides of the creating frame) contained within the P. acnes polymuclectides of the printed specification, but was obtained in electronic format directly the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_esquences

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, particularis), uvertis and endophthalitis.

The disorders include SAPHO syndrome (synovitis, acne, and the cane) by acness is also involved in infections of bone, joints and the central revous system, however it is particularly involved in the inflammatory presence or absence of P. acnes in a patient comprises contacting a comple with a binding agent that binds to the proteins of the invention of sample with a binding agent that binds to the proteins of the invention of and determining the amount of bound protein in the sample. The complete and be used as antigens in the production of antibodies and determining the amount of bound activity of P. acnes polypeptides and compregulate expression and activity of P. acnes polypeptides and confined and activity of P. acnes polypeptides and confined and activity of P. acnes polypeptides and confined agents for determining P. acnes proteins for example, by the patent did not form part of the printed specification, but was for contained in electronic format directly from WIPO at

Claim 1; Page 30; 34pp; Chinese.

c immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a polymucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes colypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, polymenteleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient. The P. acnes polypeptides, polymelocides, antibodies, fusion proteins. T cell populations or antigen-presenting cells that express the polyments, or for treating and proteins, or cell populations or antigen-presenting or treating acnes protein. The polymucleotides an immune response specific for a P. acnes for undlating an immune response specific for a P. acnes protein. The polymucleotides can also be used as probes or primers for stimulation of an immune response against P. acnes, or for treating acnes the polymer of an immune response against P. acnes, or for treating acnes and the kit is useful for performing a diagnostic assay. The present reading frame) contained within the P. acnes polymelectides of the canding frame) contained within the P. acnes polymelectides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the manner of the printed specification, but was obtained in electronic format directly and the polyment and pol Gaps .. AAF81714 to AAF81740 encode the human proteases and protease inhibitors (PPIMS) given in AAB74668 to AAB74694. The PPIMS can have activities such as: anti-human immunodeficiency vitus (HIV); antidiabetic; antithyroid; immunostimulant; immunomodulator; antiinflammatory; immunosuppressive; nephrotropic; antigout; thyromimetic; cytostatic; antibacterial; thyridiate; protezozacide; antiarteriosclerotic; antiatherosclerotic; virucide; antipaciatic; and hepatotropic. PPIM polynucleotide and protein sequences can be used in the diagnosis, treatment and prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; protease; protease inhibitor; protease and protease inhibitor; ppIM; identification; diagnosis; anti-human immunodeficiency virus; HIV; antidabetic; immunostimulant; immunomodulator; antiinflammatory; antithyroid; immunosupressive; nephrotropic; antiinflammatory cycostatic; antibacterial; fundicide; protozoacide; antiarteriosclerotic; antiatherosclerotic; antipsoriatic; virucide; hepstotropic; gene therapy; autoimmune disorder; inflammatory disorder; AIDS; DiGeorge's syndrome; severe combined immunodeficiency disease; SCID; Chediak-Higashl syndrome; Crohn's disease; Addison's disease; autoimmune thyroiditis; gout; Crohn's disease; Mashimoto's thyroiditis; Sjogren's syndrome; infection; Crohn sease; sandrome; cancer; Werner's syndrome; call proliferative disorder; arteriosclerosis; atherosclerosis;

AMERICAND STANDS SERVING AND SECRET SERVING TO SERVING THE PROCESS.

C. Protein genes and AABO170-AABO1849 represent the proteins they encode. Decision of the secreted protein fragments or variants.

C. C. AABO1850-AABO1860 represent human secreted protein fragments or variants.

C. C. AABO1850-AABO1860 proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

C. C. AABO1850-ABO1860 proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

C. C. AABO1850-ABO1860 proteins are useful for preventing, treating the presence of mutations in the wide presence of mutations in the mew genes. Specific uses are described for each of the 28 genes, developing products for the diagnosis or treatment of proliferative disorders, tumours, foetal and developmental abnormalities, haematopoietic disorders, foetal and developmental abnormalities, haematopoietic disorders, edulopmental abnormalities, continued disorders, atheriopherial asthma, skind disorders, genticophenia, asthma, skind disorders, proteins disorders, diabotes atherosclerosis, cardiovascular disorders, prograndissis), sepsis, diabotes, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs to regenerate tissues, to identify their cognate ligands or binding to preservative to modify storage properties. Antibodies specific for a protein of the invantion of the invantion also be used to an heaved as a food additive or repenent of the invantion and an also be used in allowiating commenced as a food additive or repenent of the invantion of the invantion and an also be used to an also be used as a food additive or repenent of the invantion and an also be used as a food additive or repenent of the invantion and an also become a serviciated and an also become and

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, disestive disorders (e.g. acquired disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haamatopoietic disorders, neural disorders (e.g. Alzheimer's, haamatopoietic disorders, neural disorders (e.g. Alzheimer's, seningitis, sakhison's, creutzfeldt-Jacob disease, encephalomyelitis, meningitis, and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunosuppressive; antiinflammatory; antiasthmatic; antiallergic; cytostatic; cerebroprotective; neuroprotective; nootropic; cardiovascular; antiatreriosclerotic; gene therapy; human secreted protein; immune disorder; inflammation; respiratory disorder; cancer; CNS disorder; neurodegenerative disorders; inflammatory bowel disease; nephritis; Crohn's disease, asthma; allergy; multiple sclerosis; ischaemic brain injury; Parkinson's disease; Alzheimer's disease, atheroaclerosis; myocarditis; chromosome mapping; triple helix formation; antisense gene therapy; forensic biology.
                                                                                                                     New fusion protein for treating disease e.g. diabetes comprises an albumin fused to a therapeutic protein.

The invention relates to 592 new human secreted polypeptides useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or polypeptides comprising an amino acid methodies or antibodies or antibodies or antibodies or antibodies. Sequences The polypeptides, agonists or antagonists that binds to acids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing disgnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for disgnoses, respiratory conditions [e.g. inflammatory bowel disease, disorders, inflammatory conditions [e.g. inflammatory bowel disease, allergy), cancers (e.g. gastric, ovarian or lung cancer). CNS disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative disorders (e.g. parkinson's disease or Alzheimer's disease), and cardiovascular disorders (e.g. atherosclerosis or myocarditis). The cardiovascular disorders (e.g. atherosclerosis or myocarditis). The polypuncleotides are useful for chromosome identification, chromosome mapping, for controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identifying individuals from minute biological samples, in forensic biology, and se hybridization corresponds to resting or preventing neural disorders, pulmonary, cardiovascular, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, in electronic format directly from NIPO at the invention, but was obtained in electronic format directly from WIPO at

The invention relates to novel genes ADA3629-ADA40565 and proteins ADA40566-ADA40501 for human secreted proteins, useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene treating or ameliorating medical conditions e.g. by protein or gene fragments, and agonists or antagonists that bind to the polypeptide are diagnostic or preparing a diagnostic or parmaceutical composition for one preparing cancer or other hyperproliferative disorder. The polypeptides and mucleic acid molecules are also useful for detecting, preparing cancer or other hyperproliferative disorders including neoplasms, autoimmune crown hyperproliferative disorders including neoplasms, autoimmune crown hyperproliferative disorders including neoplasms, autoimmune crown hyperproliferative disorders (e.g. diabetes, rheumatoid arthritis, systemic lupus canaemia, haematopoietic or haematological disorders (e.g. anaemia, chaematopoietic or haematological disorders (e.g. anaemia, chaematopoietic or haematological disorders (e.g. anaemia, chaematopoietic or parting such are cacema, inflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory cromporticins adisease), neurodegenerative disorders (e.g. thepathelial cell proliferation, radiation hybrid mapping or long-consecution or diagnostic probes. The polypeptides and antibodies are consecutable or disorders of epithelial cell proliferation, radiation mapping, as molecular weight markers, or as consecution or diagnostic probes. The polypeptides and antibodies are consecuted in electronic format directly from MIPO at the printed specification, but was consecuted by examined in electronic format directly from WIPO at the printed specification, but was consecuted and reference of the printed specification, but was consecuted and reference of the printed specification.
                                                                                                                                                                                                                                                                                                                                           New human secreted proteins and nucleic acid molecules, useful for preparing a diagnostic or pharmaceutical composition for diagnosing, preventing or treating cancer or other hyperproliferative disorder, asthma, allergies or AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; SEQ ID NO 1077; 3205pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               obtained in electronic format directly fiftp.wipo.int/pub/published_pct_sequences
